# Research on Higher Education of Traditional Chinese Medicine in Southeast Asia in the Post-epidemic Era

Jing Li Xiaoxing Sun

Hubei University of Chinese Medicine

HE7187

## Introduction and Purpose:

To research the development and challenges in higher education of Traditional Chinese Medicine (TCM) in China and Southeast Asia during the pandemic and put forward suggestions, in order to promote the development of TCM in Southeast Asia and the implementation of the "going out" strategy of TCM.

## Research Method: Mathematics Statistics

## Main Process /Analysis on challenges:

- In China :
1. The decreased number of international students
  2. Scarcity of online teaching experience

- In South Asia:
1. The imbalance of Internet Penetration
  2. Difficulty in clinical practice instruction

## Results and Analysis /Suggestions:

- In China:
1. Expand enrollment of overseas students
  2. Promotion of online teaching practice

- In South Asia:
1. Promoting the Internet penetration rate & exploring the "Internet + TCM" education model
  2. Developing "online + offline" clinical practice teaching mode

**Conclusions:** Take China as the center, develop the higher education and internationalization of TCM, and take Southeast Asia as peripheral to expand the number of TCM talents, explore appropriate mode to better train the Southeast Asian TCM talents, promote its transition and upgrade.
